

Press release

Full of new products: Installation catalogue
New product groups, extended product range, repair aids

Our installation catalogue has been an integral part of workshops for many years. It serves as a practical guide and handbook for the workshop. With our new installation catalogue we impress with fast, easy handling. It features an even wider range of products, complete with practical explanations and illustrations. Our new ClipFix® spacer product group is included for the first time. Another focus here is the RepCon time-and money-saving repair solutions, featuring numerous new additions. Restructuring the range of electric cables has now made it easier to find our cables and cable connectors, and you'll no longer have any difficulty in distinguishing between the packing types available. We have also developed our battery post clamps further, now offering a product range that is even wider than before. The current 868-page catalogue features a total of 366 new items, including numerous repair solutions, plugs, sockets and battery post clamps. Our installation catalogue is available in German, English and French. An overview of all our catalogues can be found at:
